

Cord Blood Hematopoietic Stem Cells

*from biology to ex vivo expansion and
plasticity*

Hector Mayani, Ph.D.
Hematopoietic Stem/Progenitor Cells Laboratory

IMSS National Medical Center, Mexico City

Umbilical Cord Blood

H E BROXMEYER

UCB contains hematopoietic stem and progenitor cells at significant levels

E GLUCKMAN

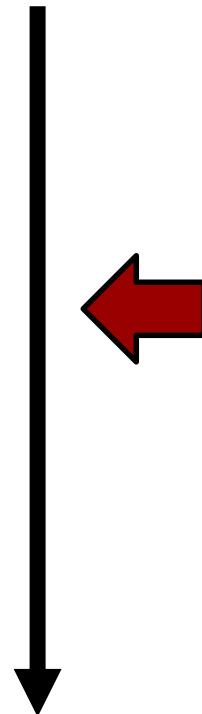

First UCB transplant

Clinical impact of UCB cells

- More than **30,000** HCT transplants have been performed using UCB cells
- **Cord blood banking** (public and private) throughout the world
- More than **700,000** UCB units stored in public banks, and more than **1 million** units in private banks worldwide

Hematopoietic Cell Transplantation

Biological characterization and
in vitro manipulation of HSC

HSC-based Cellular Therapy

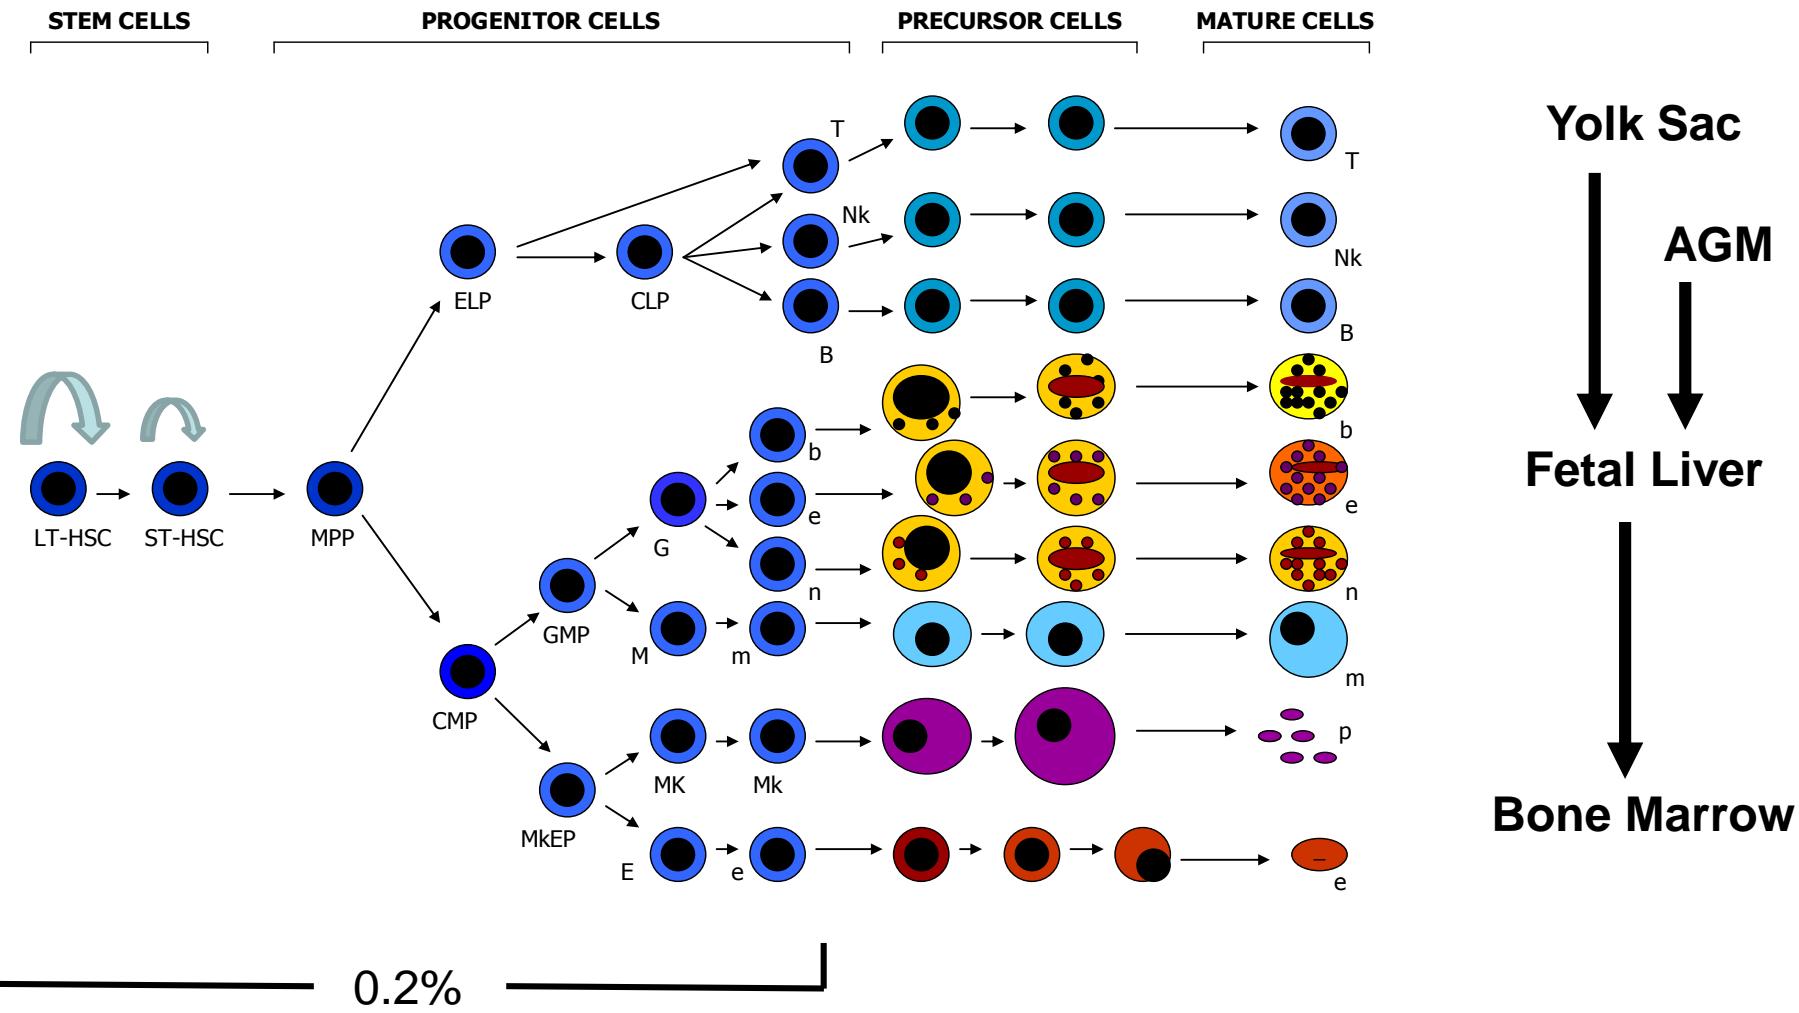

HSC Laboratory

The Hematopoietic System

Biological differences between HSC from UCB and adult BM

Hematopoietic Stem Cells

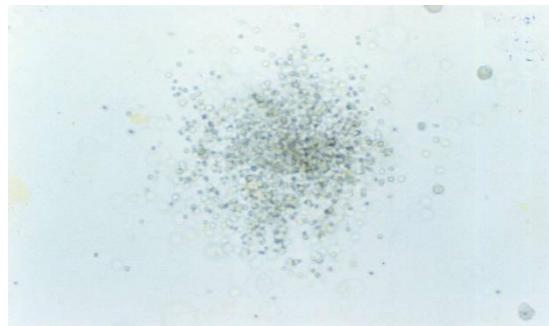

Adult Bone Marrow: 1 HSC per 60,000 nucleated cells

Umbilical Cord Blood: 1 HSC per **20,000** nucleated cells

Hematopoietic progenitor cell content in UCB and adult bone marrow

No. progenitors / 10^5 MNC

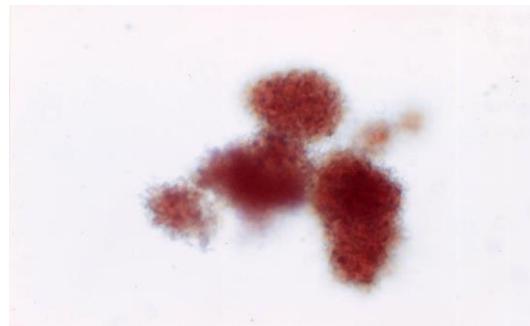

Myeloid

ABM = 164 ± 57

UCB = 160 ± 49

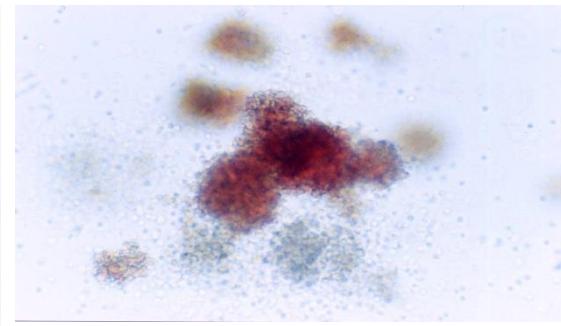

Erythroid

ABM = 137 ± 51

UCB = 179 ± 64

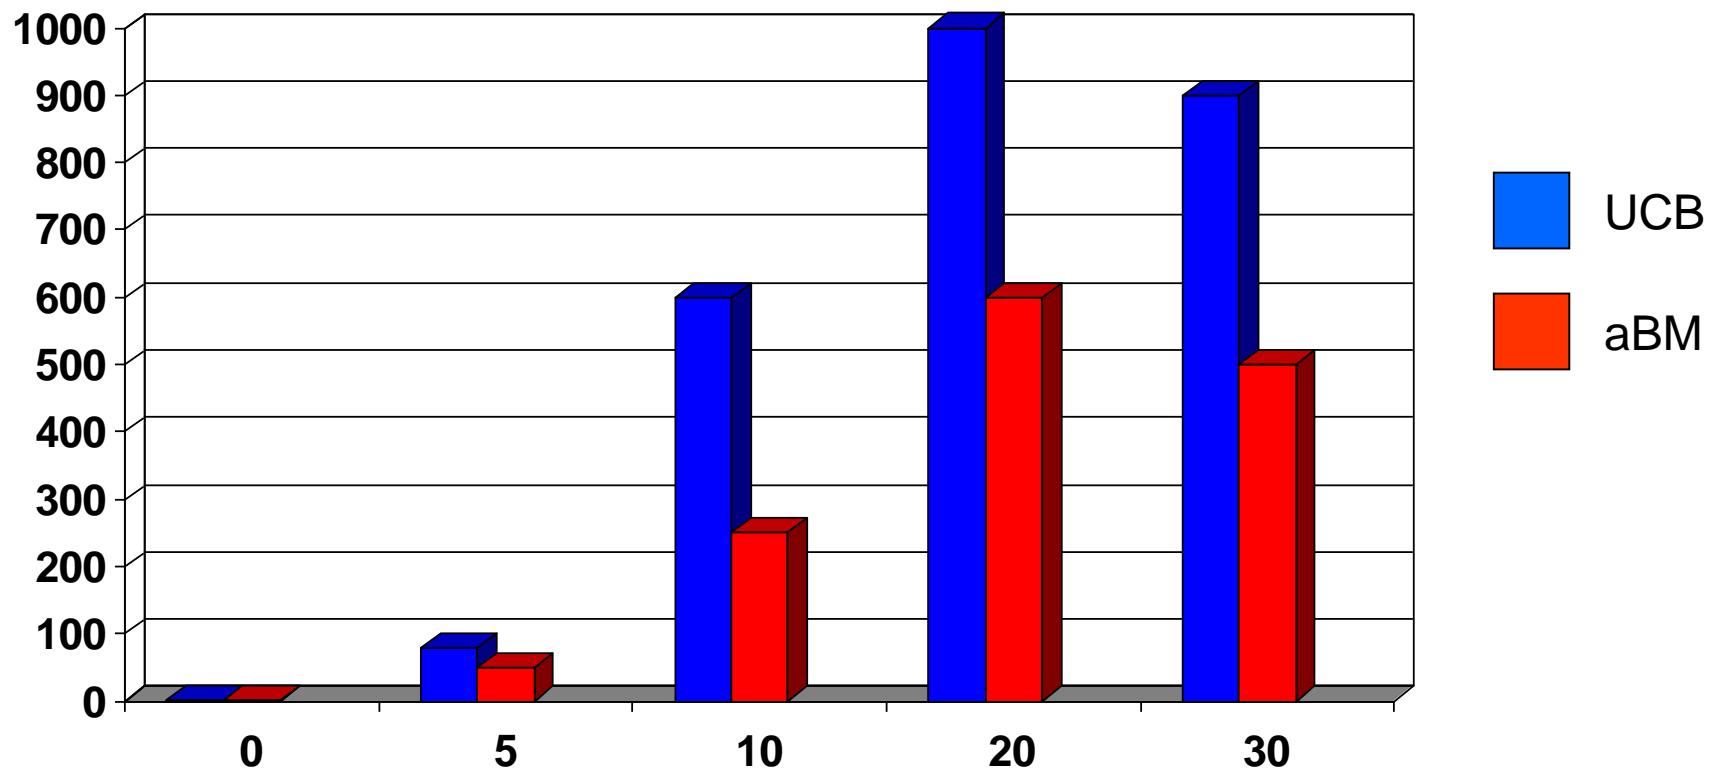

Multipotent

ABM = 4 ± 3

UCB = **$21 \pm 10^*$**

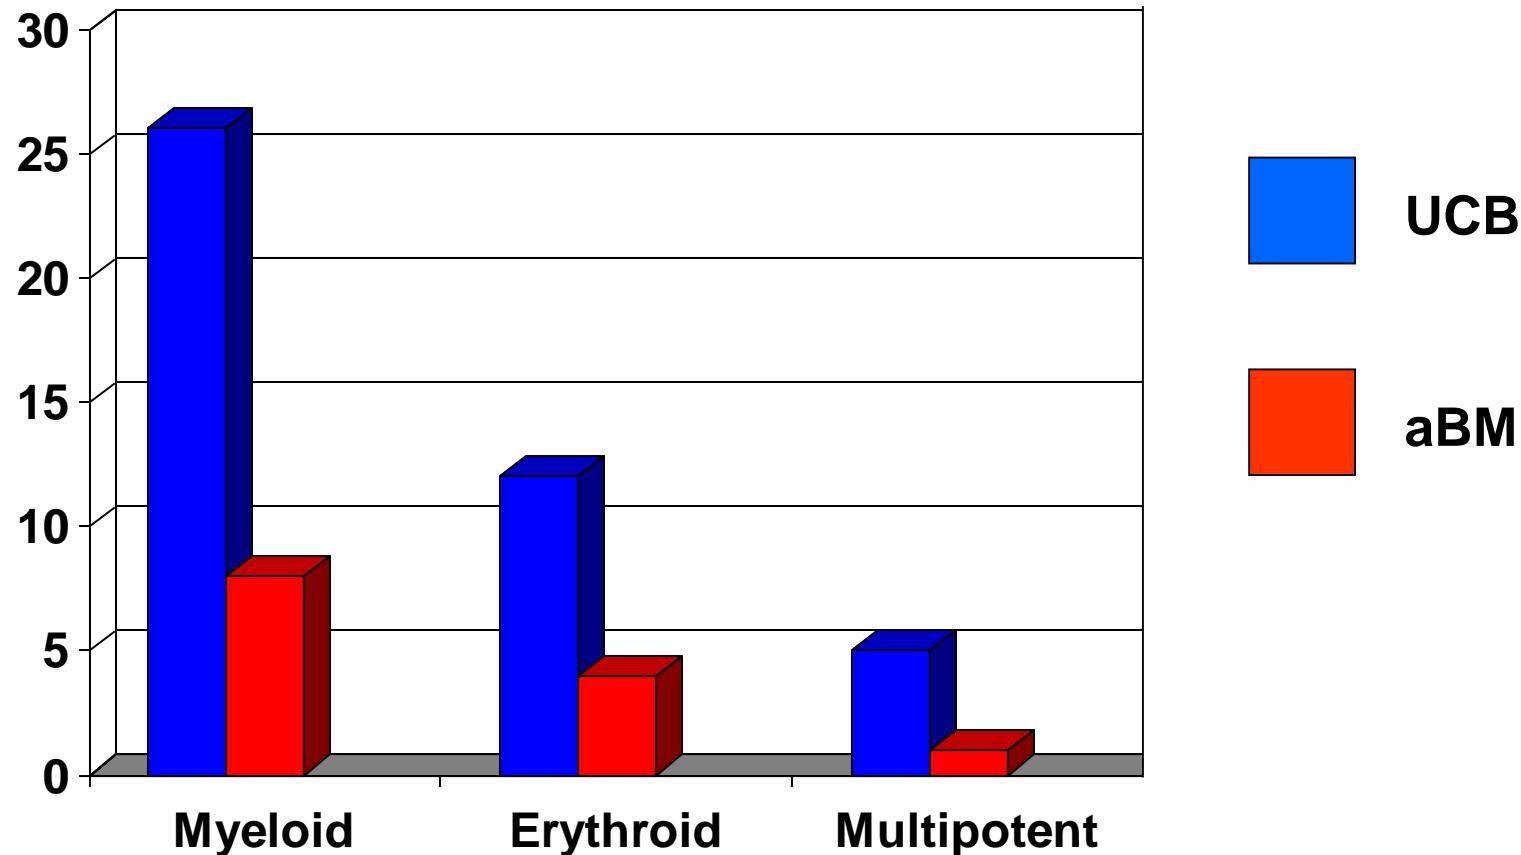

HSC/HPC from UCB possess higher proliferation* potentials than adult cells

* Fold-increase in total cell number

Martínez-Jaramillo G, et al
Stem Cells Dev 2004

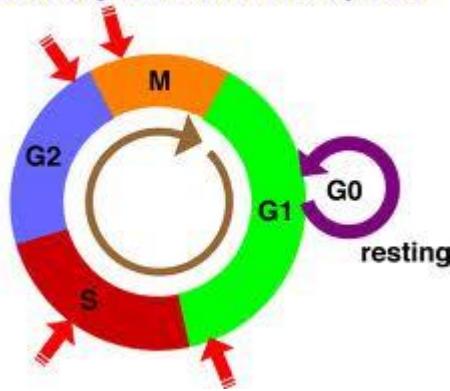

HSC/HPC from UCB possess higher expansion* potentials than those from ABM

* fold-increase in HPC number

*Martínez-Jaramillo G, et al
Stem Cells Dev 2004*

The Cell Cycle and the Checkpoints

Cell cycle kinetics in culture

Alvarado-Moreno A, et al
Stem Cells Dev 2007

UCB

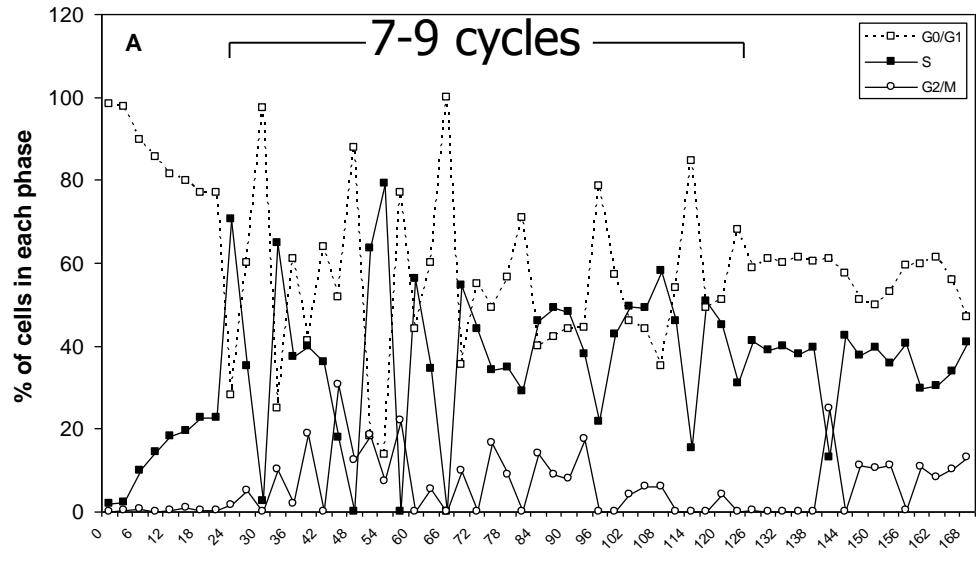

Figure 2

aBM

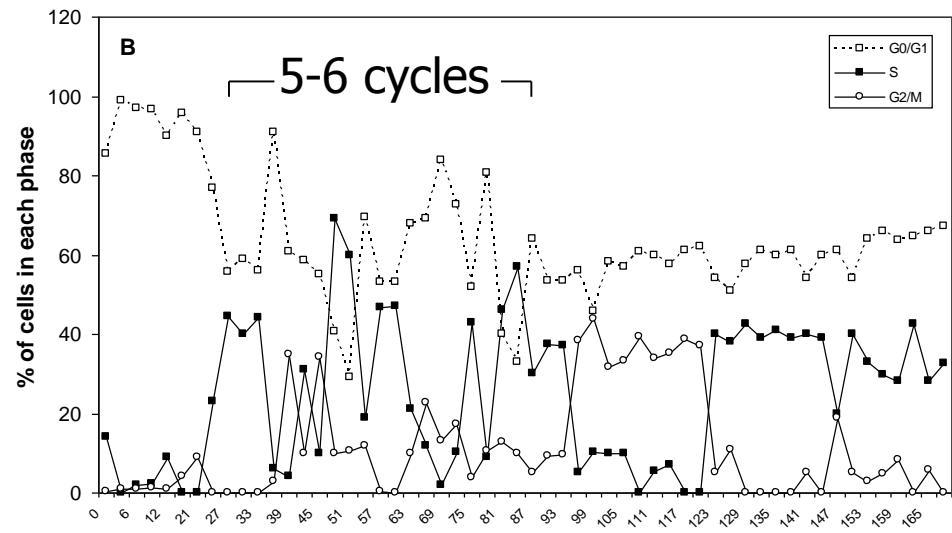

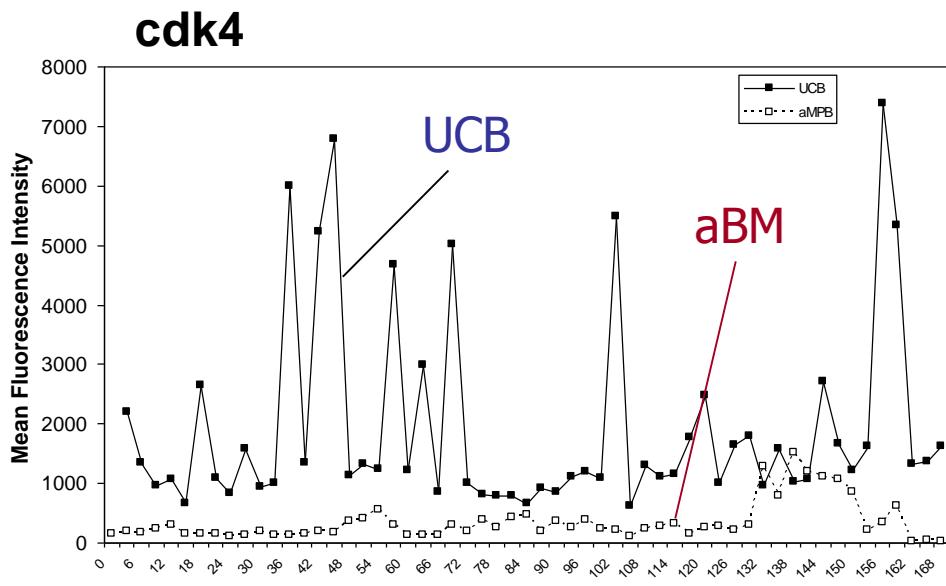

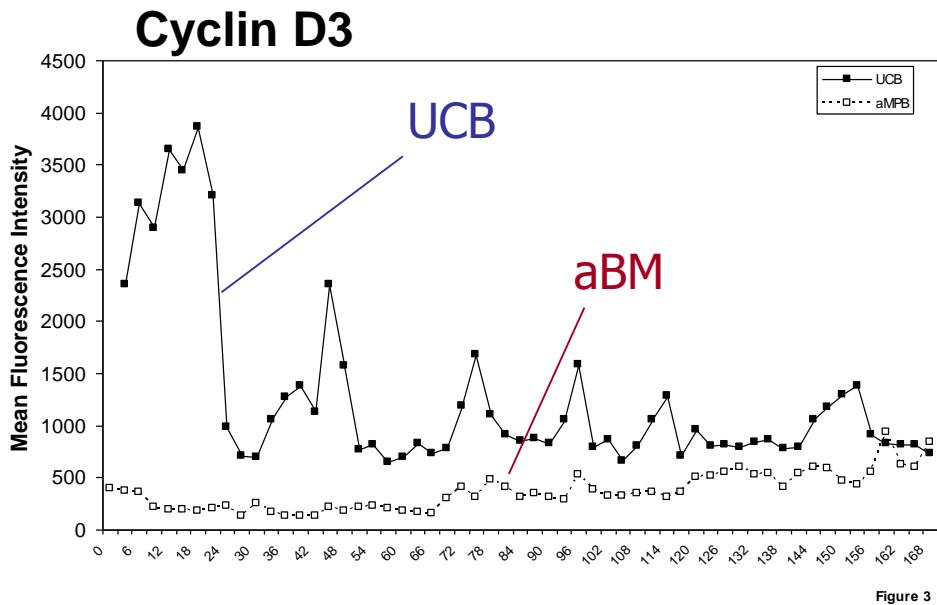

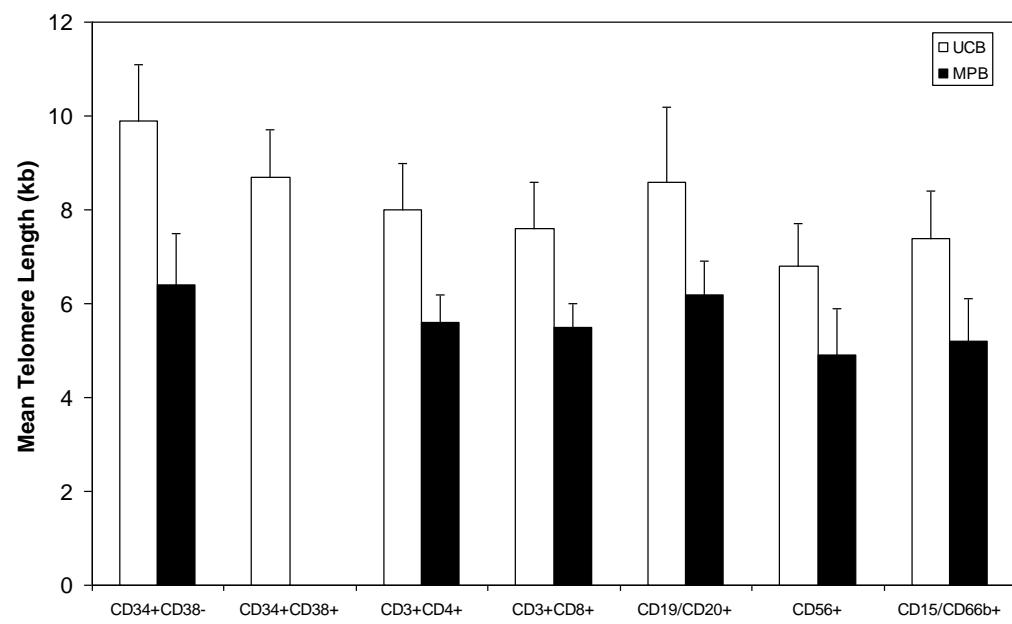

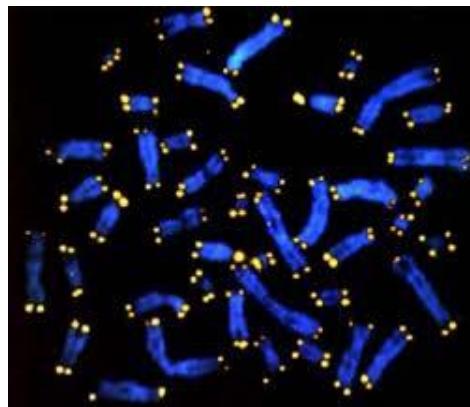

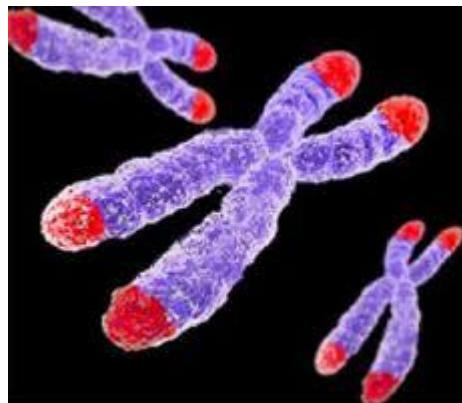

Figure 2

Expression levels of cell cycle regulators

Alvarado-Moreno A, et al
Stem Cells Dev 2007

HSC from UCB possess longer Telomeres than those from adult subjects

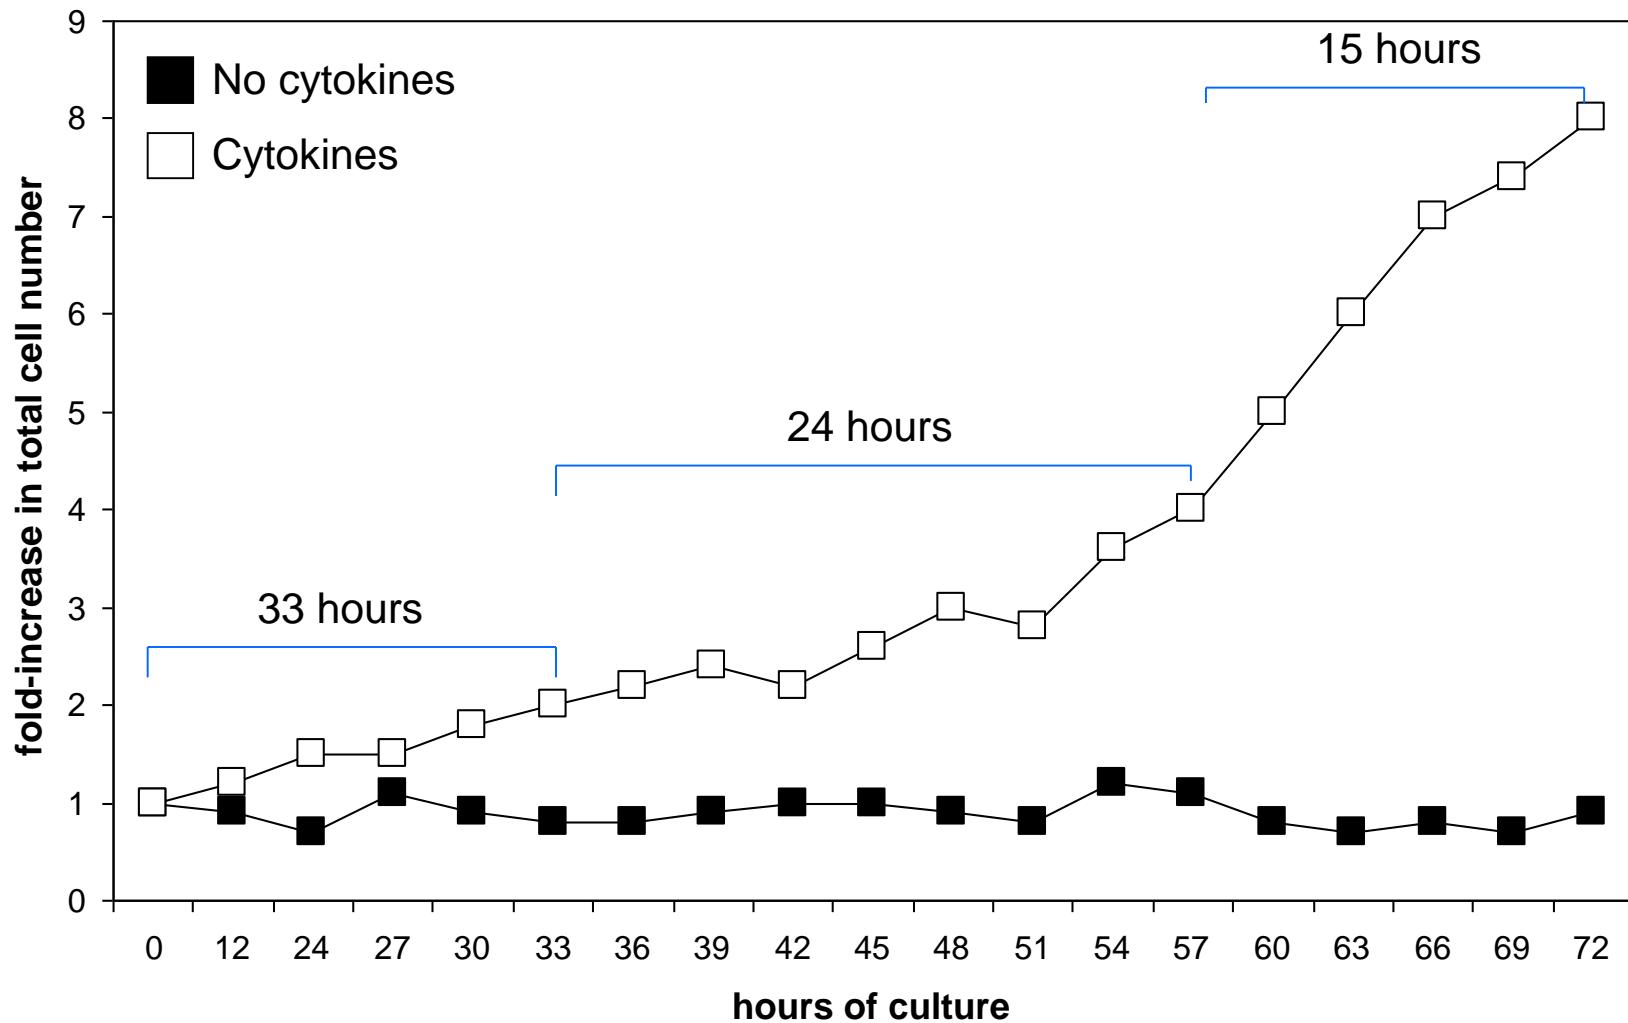

HSC: UCB vs aBM

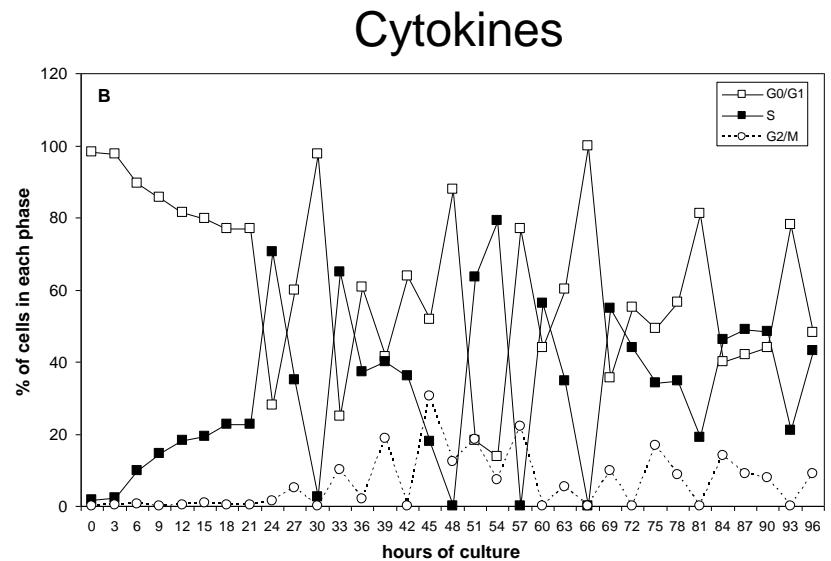

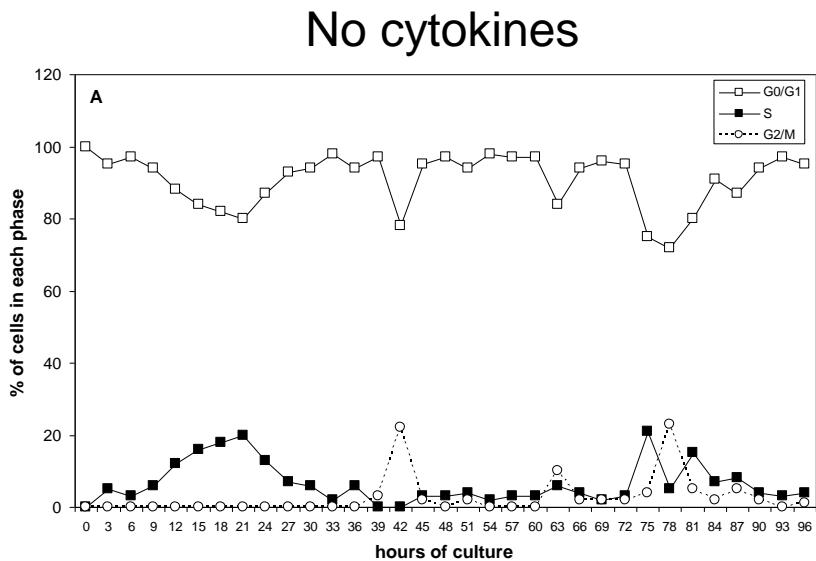

- UCB contains a **higher frequency** of HSC and multipotent HPC than aBM
- HSC/HPC from UCB possess **higher proliferation and expansion potentials** in vitro than equivalent cells from aBM
- Such differences in proliferation and expansion potentials seem to be due to **differences in the expression of cell cycle regulators and telomere length**

Role of hematopoietic cytokines on the in vitro biology of HSC

Doubling time in liquid cultures

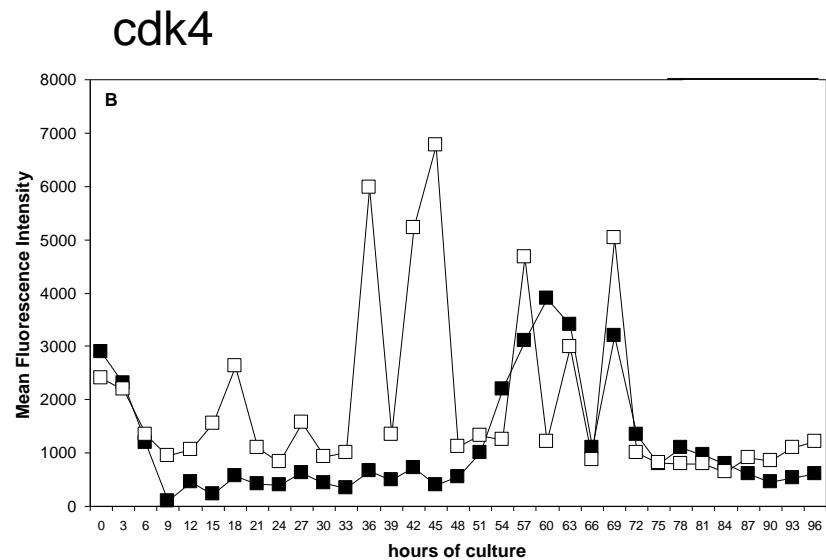

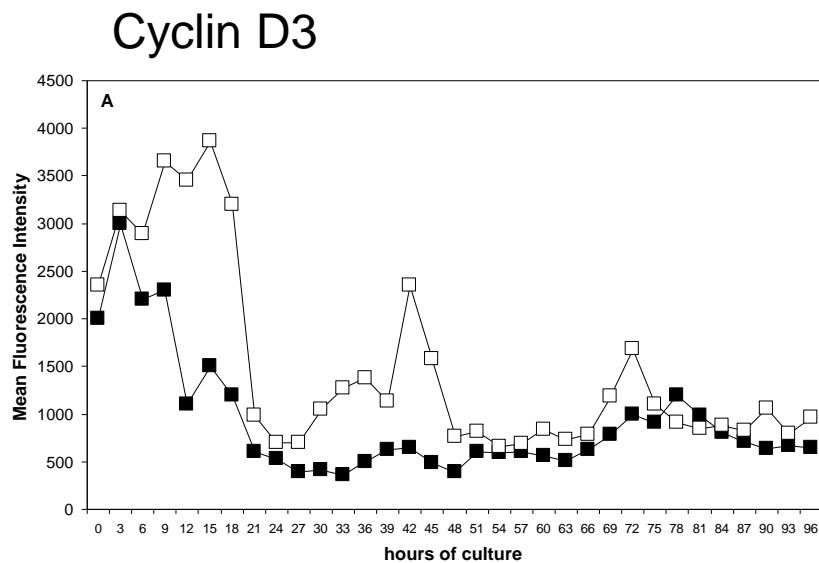

Cell cycle dynamics in culture

Cytokines = SCF, FL, TPO, IL3, IL6, GM, G, EPO

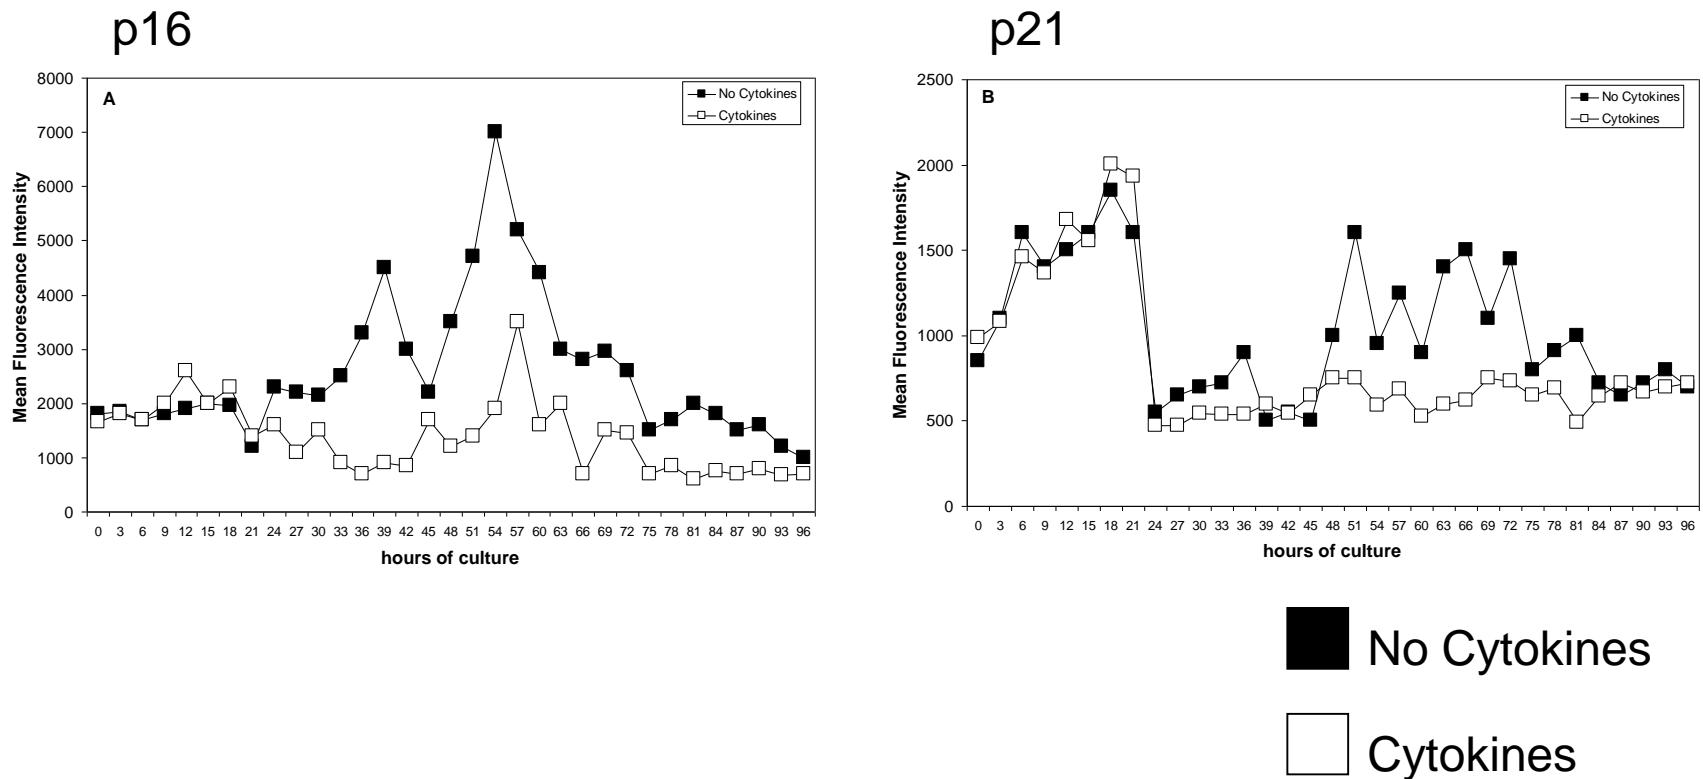

Expression levels of cell cycle stimulators

■ No cytokines
□ Cytokines

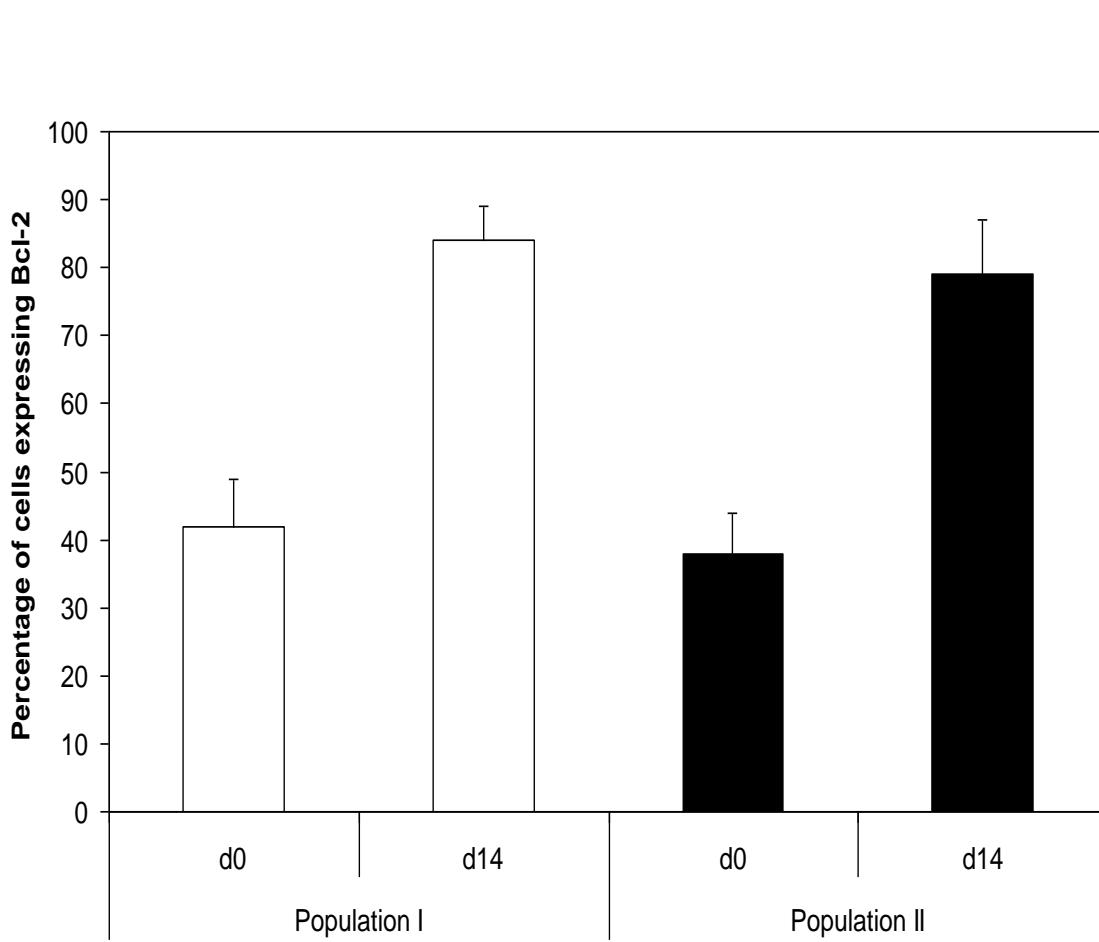

Cytokines = SCF, FL, TPO, IL3, IL6, GM, G, EPO

Expression levels of cell cycle inhibitors

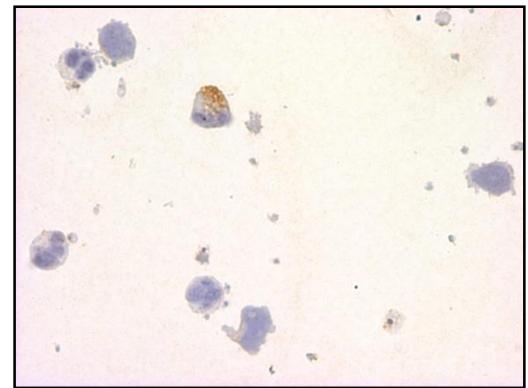

Cytokines = SCF, FL, TPO, IL3, IL6, GM, G, EPO

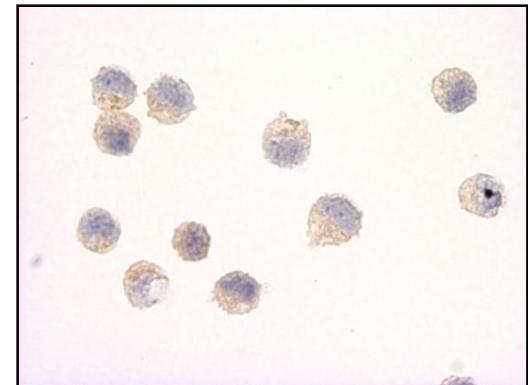

Expression of Bcl-2

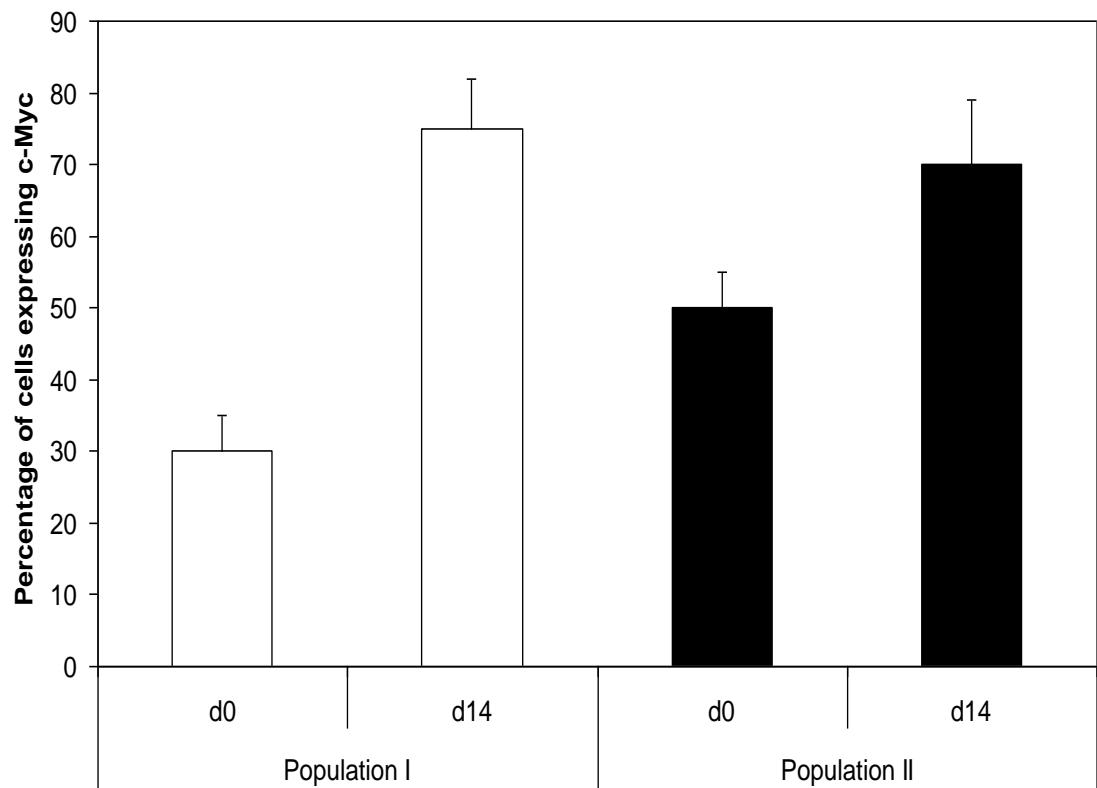

Day 0

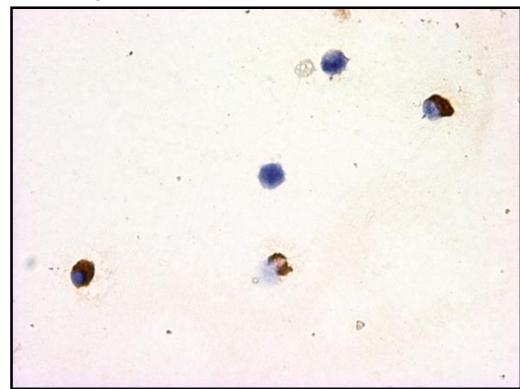

Day 14

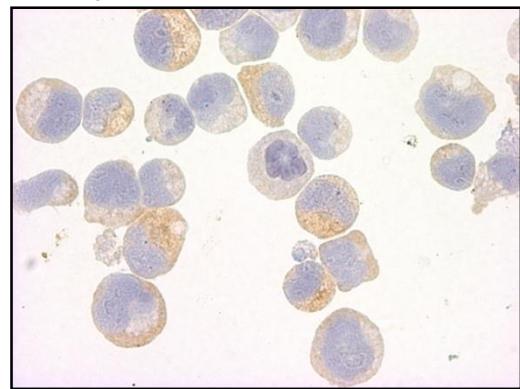

Expression of c-Myc

Day 0

Day 14

Stimulatory cytokines

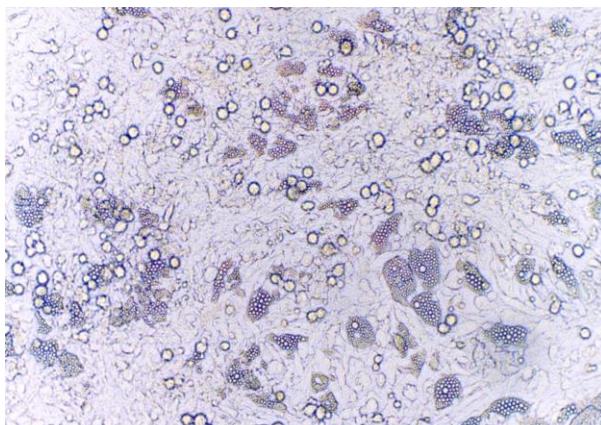

- Favor expression of cell cycle promoters
- Down-regulate expression of cell cycle inhibitors
- Favor expression of anti-apoptotic proteins
- Favor expression of proliferation stimulators

Strategies for ex vivo expansion of HSC

HSC expansion in culture

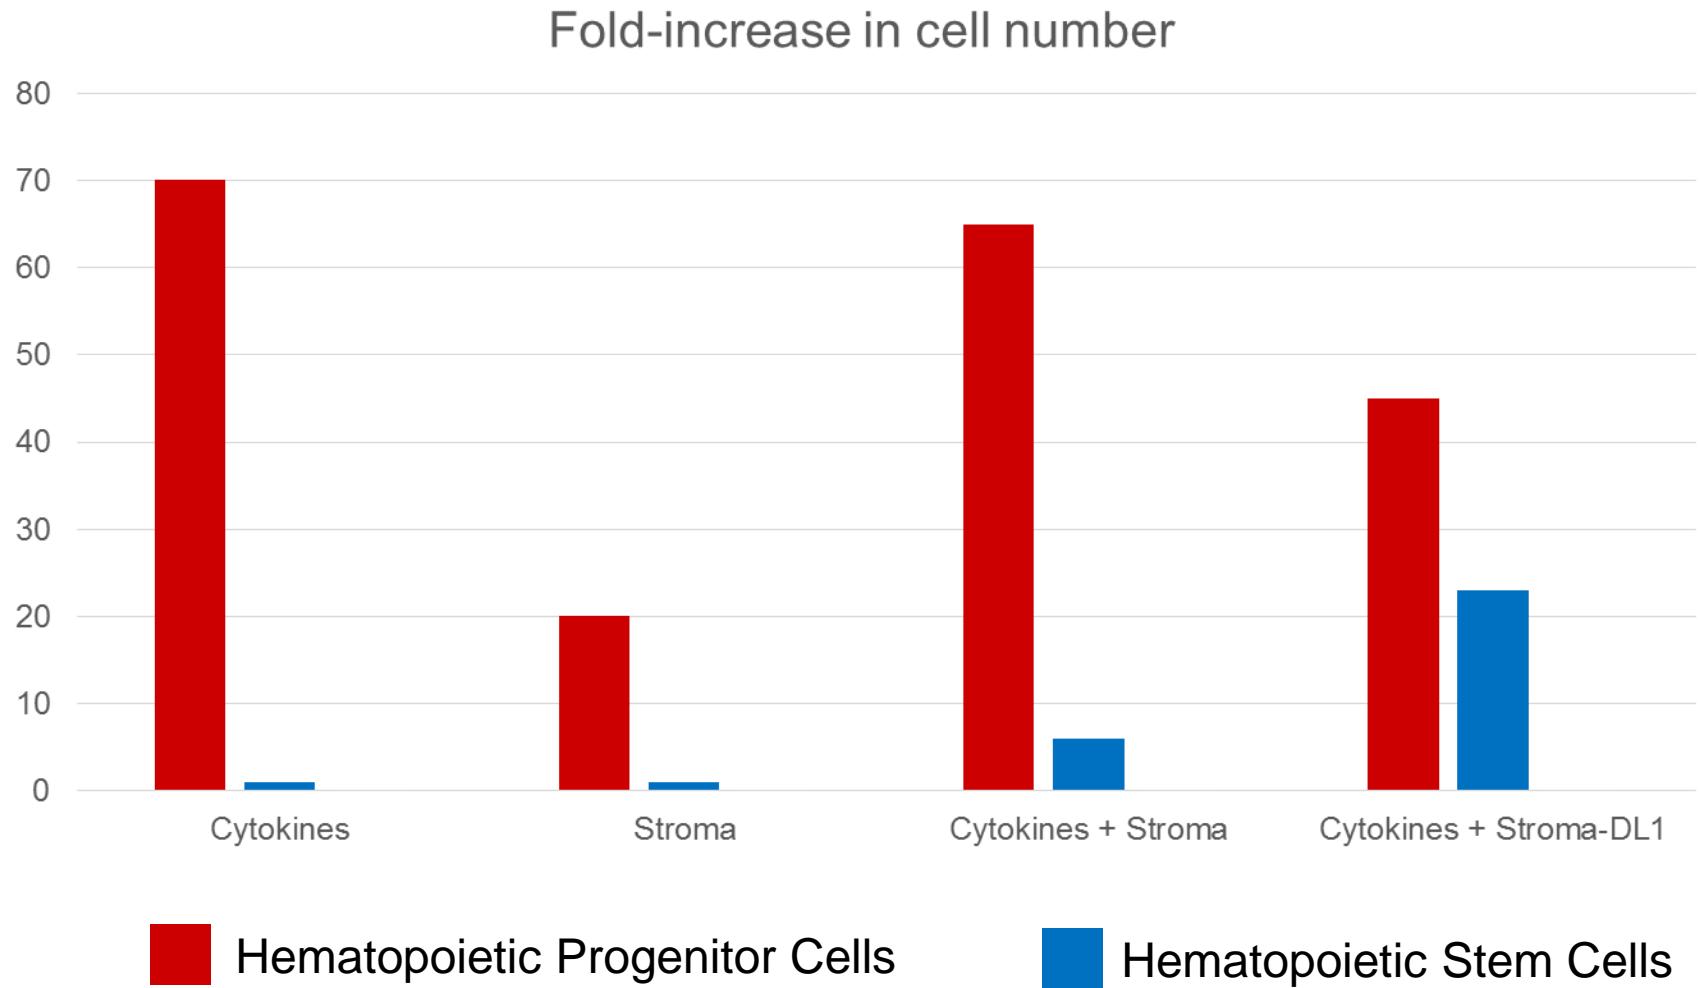

Liquid suspension cultures of HSC-enriched cell populations in the presence of recombinant stimulatory cytokines

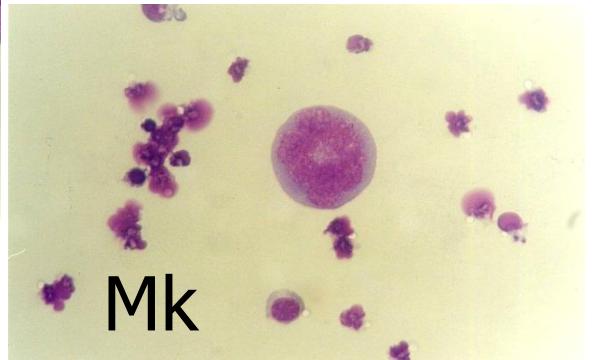

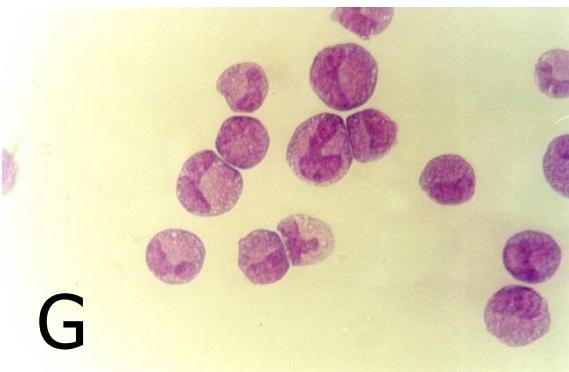

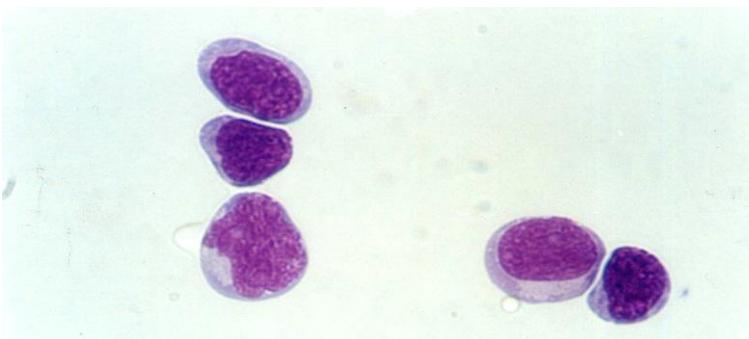

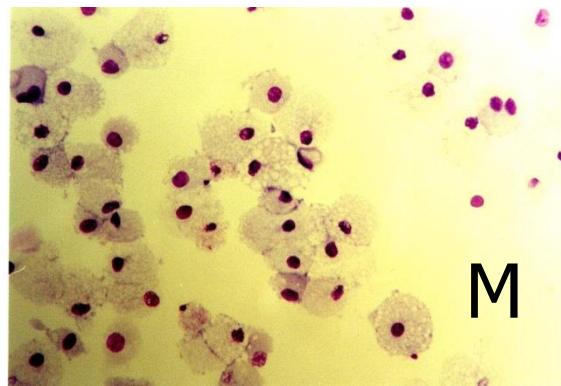

Liquid cultures of HSC-enriched cell populations in the presence of recombinant stimulatory cytokines and stromal cells

Ex vivo expansion of HSC

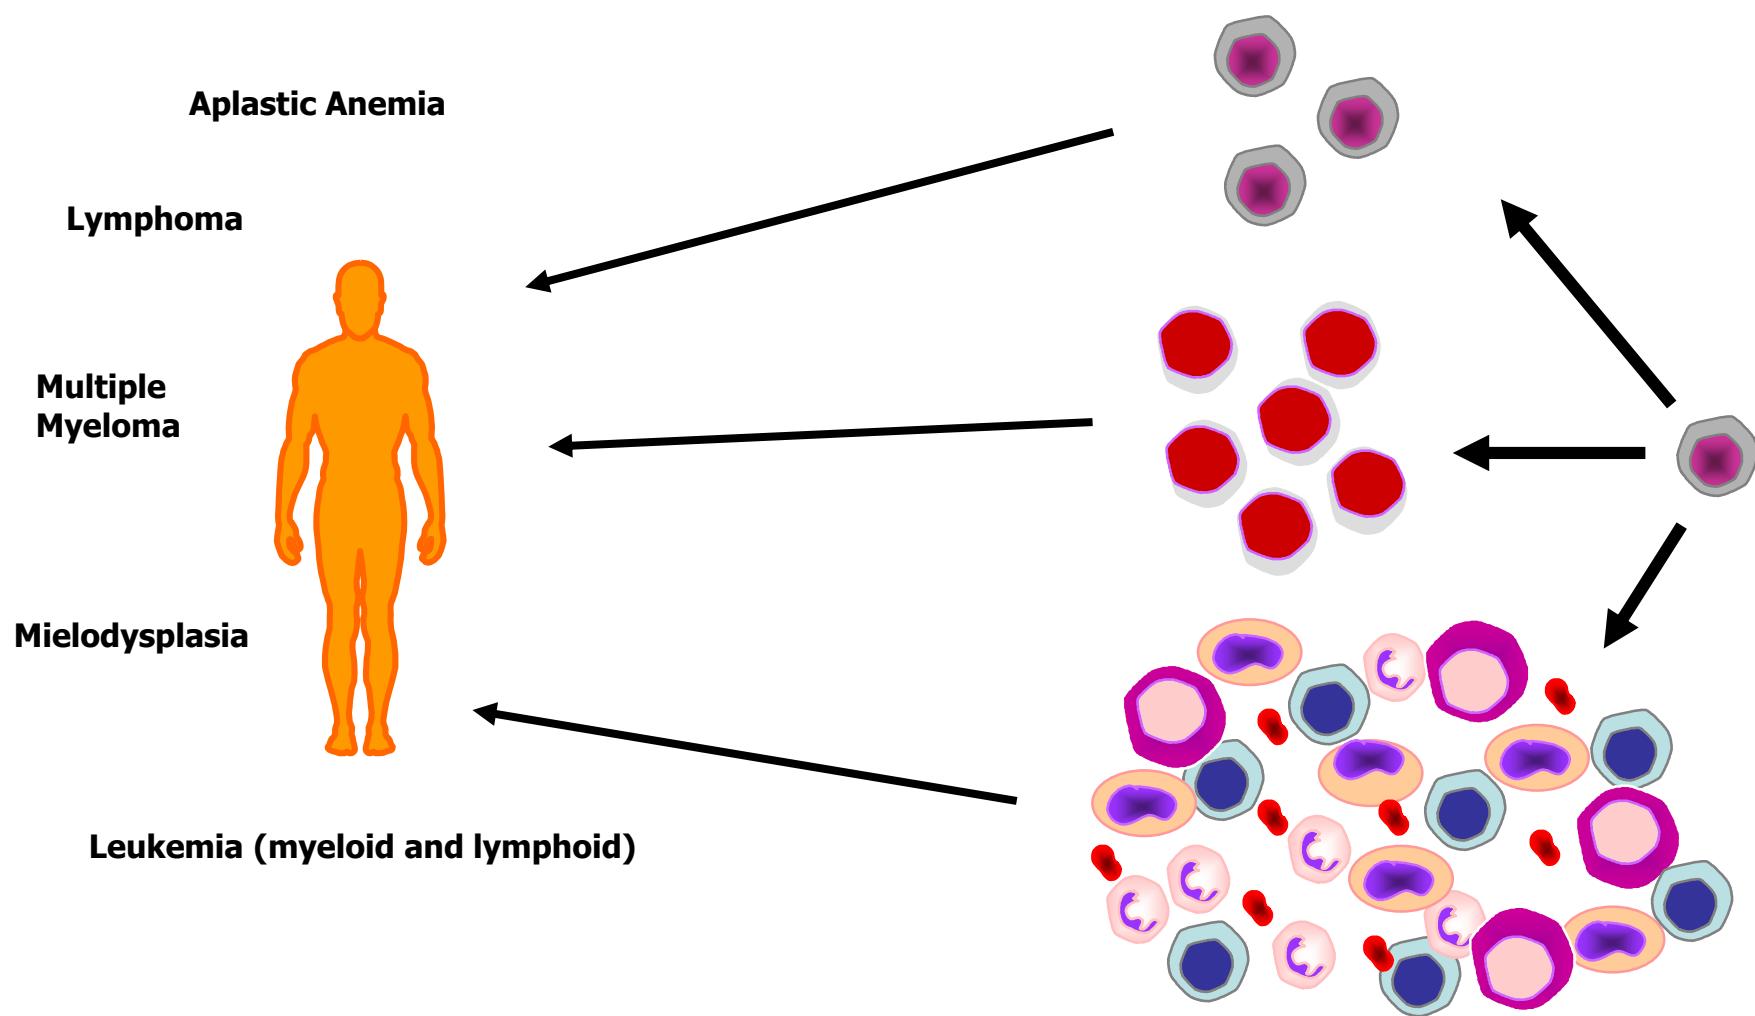

HSC differentiation

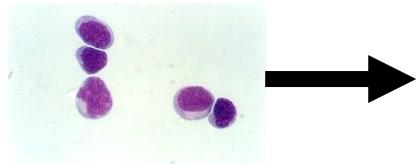

Multipotency vs Plasticity

HSC-based cell therapy for hematologic disorders

HSC

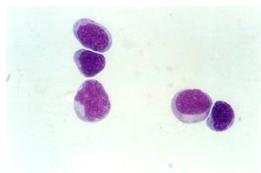

CD34⁺ CD38⁻ Lin⁻

¿Non hematopoietic cells?

¿Neural cells?

Experimental Design

HSC

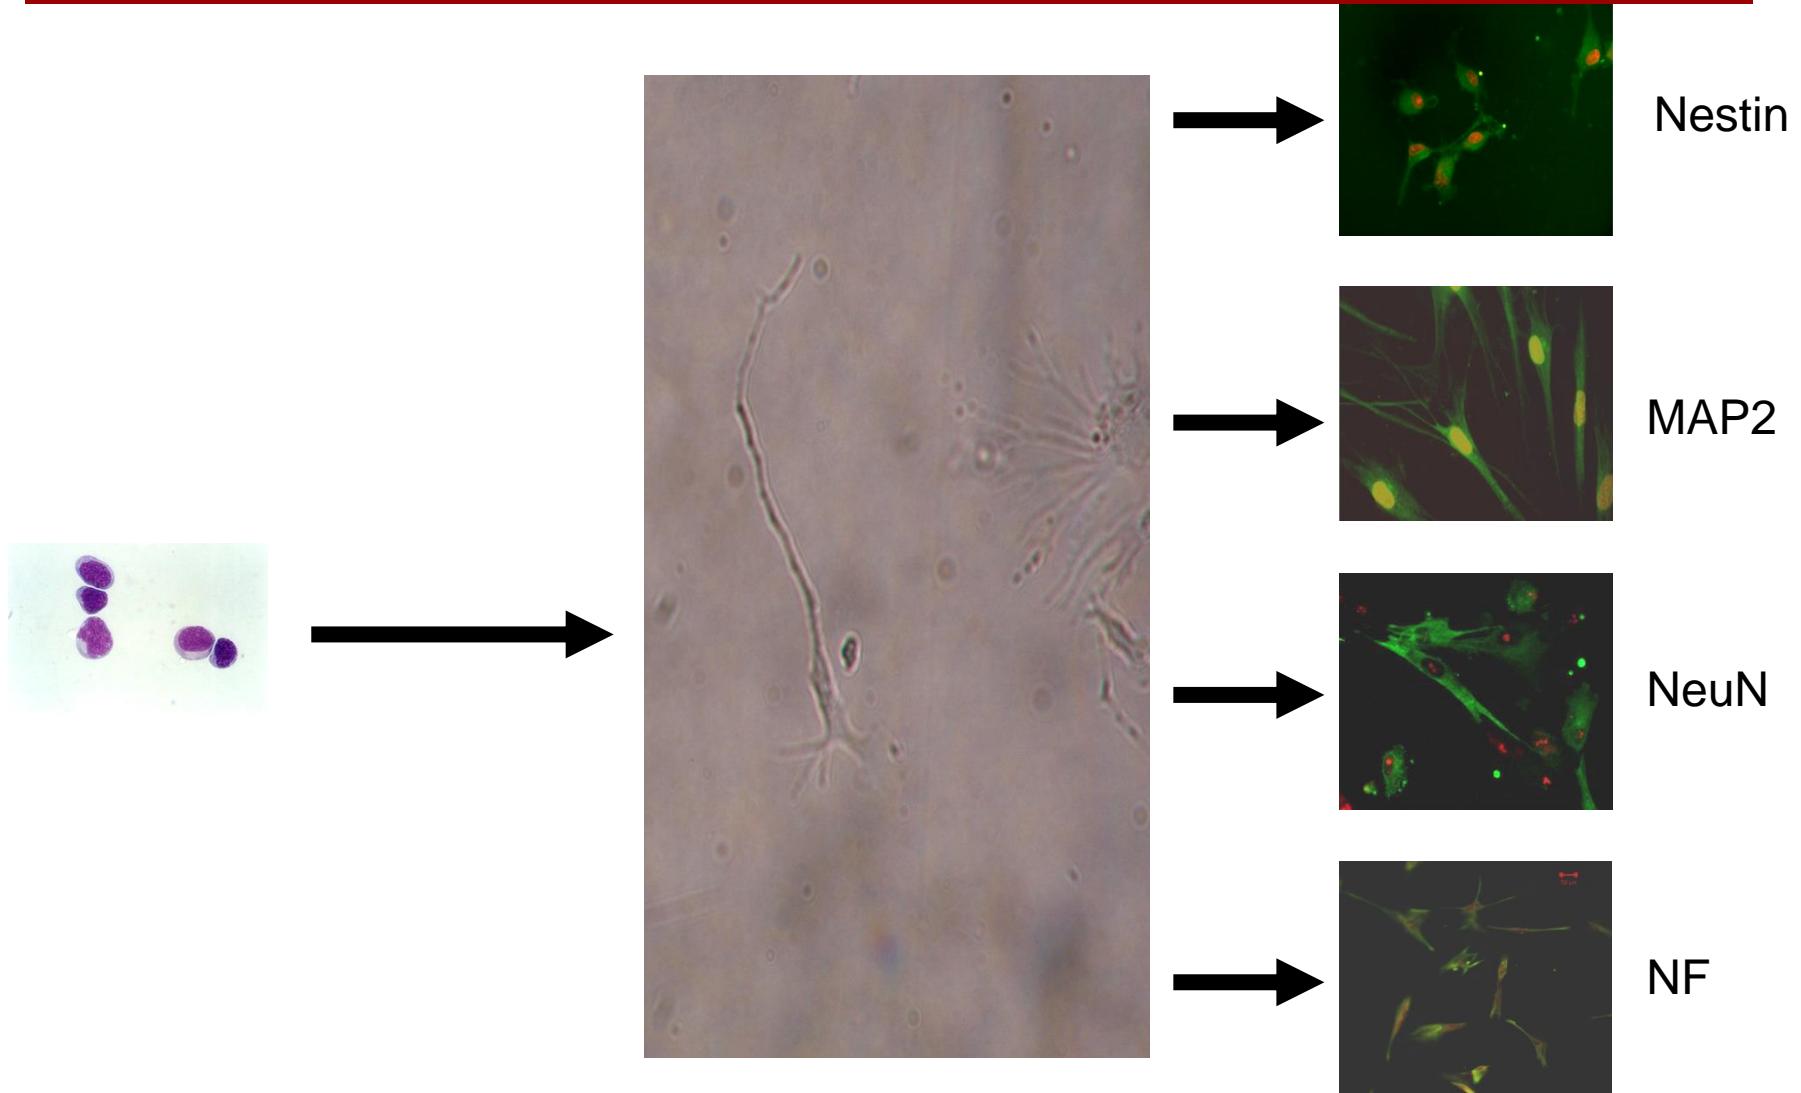

Liquid culture in 3 phases:

proliferation – priming - differentiation

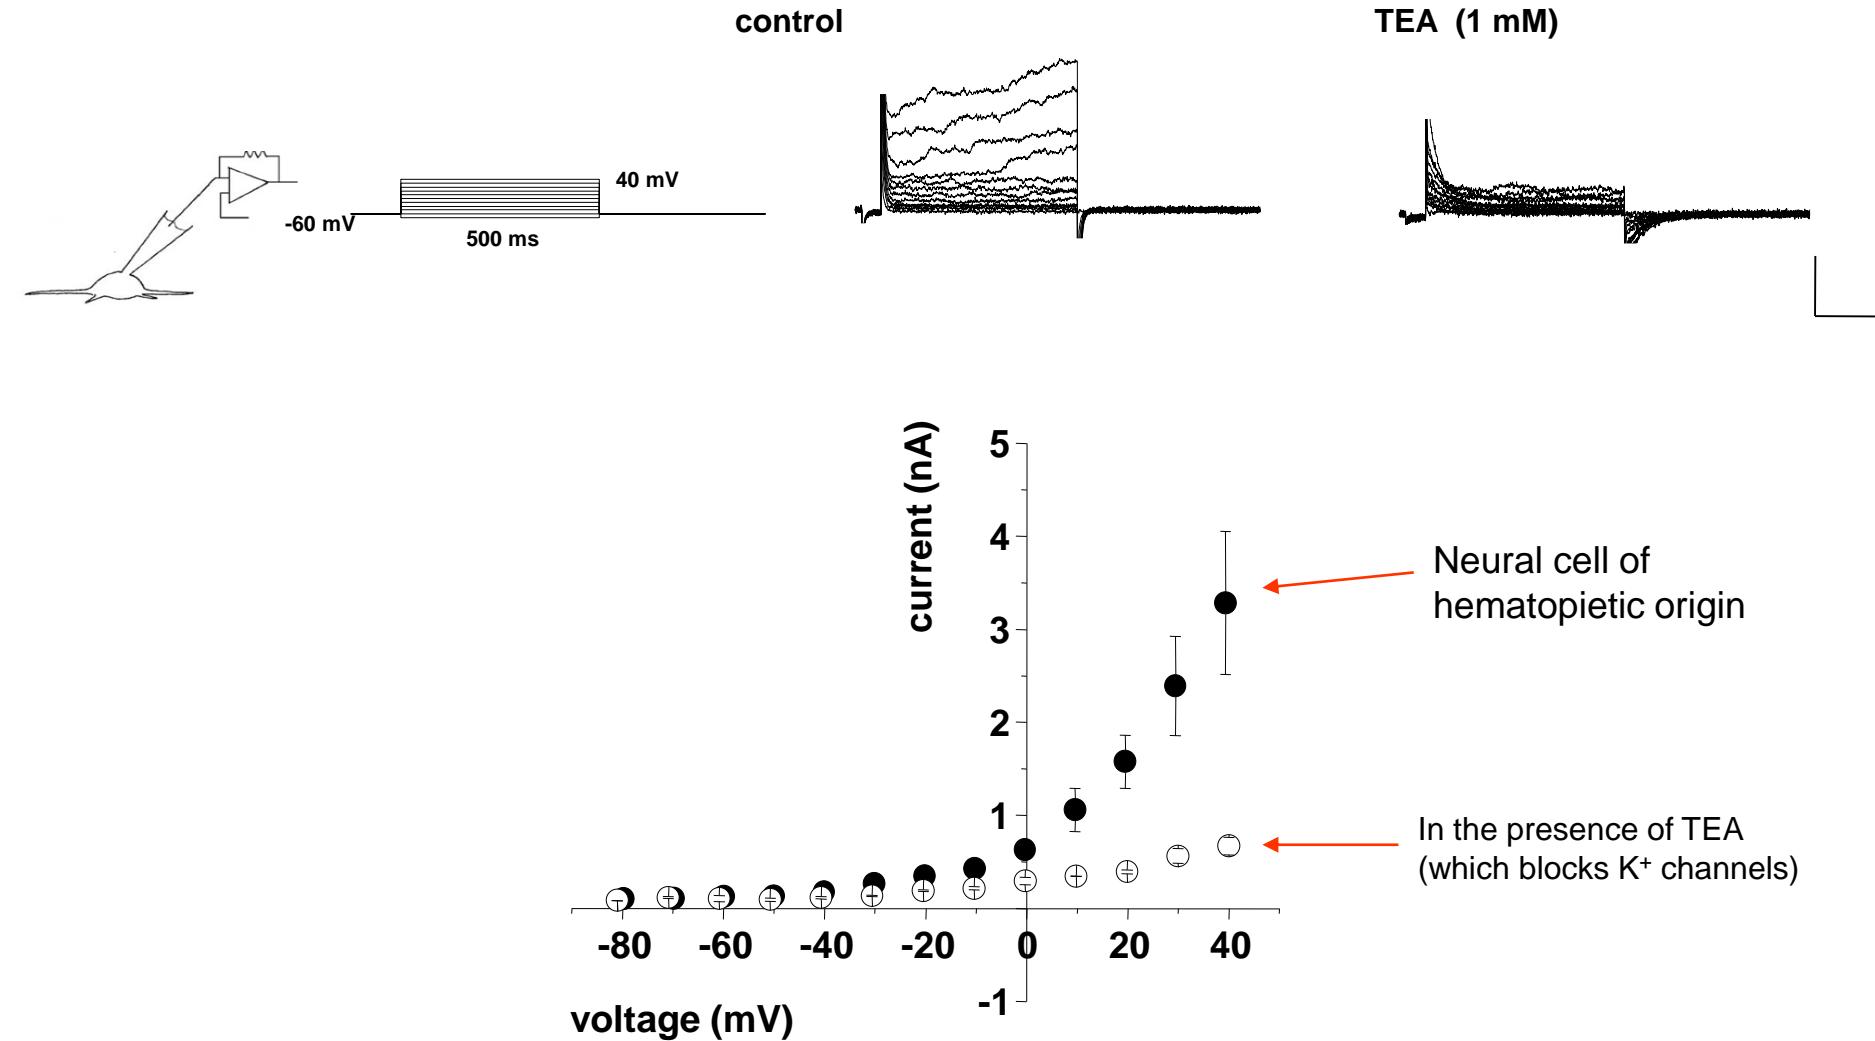

CD34⁺ CD38⁻ Lin⁻

25 days

Expression of neural proteins

Patch clamp on neural-like cells originated from HSC

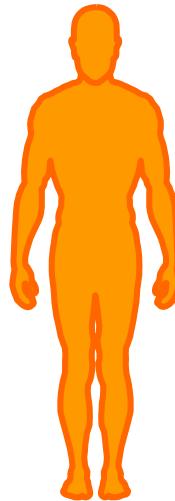

In vitro manipulation of HSC

- By using particular cytokine combinations, UCB-derived HSC can be selectively induced to differentiate into specific hematopoietic lineages
- Under the appropriate culture conditions, UCB-derived HSC can give rise to non-hematopoietic cells that show morphological, molecular and functional features of neural cells

HSC-based cell therapy for non-hematologic disorders?

Neurodegenerative disorders
Osteoporosis
Myocardial infarction
Spinal cord injuries
Osteogenesis imperfecta

Muscular Dystrophy
